Bay Area Hiring Falls 4.8 Percent Since COVID-19 Onset

April 3, 2020 – Joint Venture Silicon Valley’s Institute for Regional Studies today released a comparison of recent month-over-month changes in Bay Area hiring compared to the United States overall. The comparison includes 10 other metro areas. The analysis follows yesterday’s release of national and metro-area hiring data from LinkedIn’s Economic Graph.

The analysis shows that between February and March of 2020, the Bay Area experienced a 4.8% decline in seasonally-adjusted hiring. This compares to a 1.2% decline experienced in the month before the widespread COVID-19 cases in the U.S. and shelter-in-place orders. “The decline in hiring makes a lot of sense given the shelter-in-place since mid-March; regardless, it’s useful to understand the magnitude of hiring declines in the Bay Area, and compared to other regions,” said Rachel Massaro, the Institute’s Director of Research.

Other regions that experienced even larger hiring declines included Washington, D.C. (-6.2%), Phoenix (-8.0%), New York City (-15.0%), and Los Angeles (-15.2%). “March hiring declines were pronounced in places that had early shelter-in-place orders, like the Bay Area and Los Angeles in California, and those that were hit hardest by the virus, like New York City,” said Massaro.
